

# LET US QUANTIFY YOUR RISKS

Getting Started with rPM<sup>3</sup> Solutions

October 2014

## *We can prioritize your risks quantitatively!*

rPM<sup>3</sup> looks over the horizon at your risks and identifies those that could likely affect your performance. We then quantify them in dollars terms using our unique cost of risk expertise. This is a much more accurate and relevant approach to risk assessment than traditional qualitative methods.

## You Get the Following:

### 1) Facilitated Risk Identification Workshops

rPM<sup>3</sup> takes a slightly different approach to risk assessment. Applying our Cost of Risk expertise, we help you frame the context for risk in a much more relevant and practical way. This results in productive risk identification workshops that consistently pinpoint the probable events and areas of risk that have a realistic effect on your immediate performance and long range plans.

### 2) Facilitated Risk Assessment Workshops

Our experts guide you through an assessment process that helps you “connect the dots” between risk and effect so you can confidently affix dollar values and realistic probabilities to the risks identified.

### 3) Risk Quantification Modeling

rPM<sup>3</sup> then creates a statistical model, utilizing the values and probabilities affixed during the assessment process. We amplify these assumptions by simulating 10,000 risk events for each risk.

### 4) Independent Expert Analysis and Interpretive Report

rPM<sup>3</sup>'s experts review the results of the quantification model and provide you with an independent written evaluation of your risks and risk profile.

*“quan-ti-fy verb*

*: to find or calculate the quantity or amount of (something)”*

*- Merriam-Webster*

## Benefits:

- **Relative Accuracy** — dollar quantification assures risks are ranked and prioritized on an equal scale
- **Practical** — risks are realistically associated with the business; its decisions and performance
- **Relevant** — quantification links your risks to planning and decision-making in understandable terms
- **Measured** — with your risks quantified in dollars, the cost of risk response can now be properly measured

Quantify your risks in Dollars Terms and suddenly the horizon becomes clear and in focus.
